

USMAN SAQIB

Artificial Intelligence Engineer

Rahim Yar Khan, Pakistan | +92 3063390363 | usmansaqib1205@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

AI Engineer specializing in Computer Vision and Deep Learning, with hands on experience building and deploying CNN based models using TensorFlow, Keras, and Flask. Skilled in the complete ML lifecycle, including data preprocessing, model training, evaluation, and cloud deployment via Streamlit and Hugging Face Spaces. Combines applied machine learning expertise with a solid foundation in computer networking, including routing, switching, and network security, gained through hands on enterprise IT experience. Recent Bachelor's graduate seeking to deliver production ready AI solutions in fast paced engineering teams.

TECHNICAL SKILLS

- **Programming & Frameworks:** Python, Flask, PyTorch, TensorFlow, Keras, Scikit learn, Hugging Face
- **Machine Learning & AI:** Machine Learning, Deep Learning, Computer Vision, Natural Language Processing (NLP), CNN Architectures
- **Tools:** Streamlit, Hugging Face Spaces, MySQL, Git and GitHub, Google Colab, Kaggle
- **Computer Networks:** IP Addressing and Subnetting, Routing and Switching, Static and Dynamic Routing, TCP/IP and OSI Model, Cisco Packet Tracer

WORK EXPERIENCE

Machine Learning Engineer Intern

August 2025

CodeAlpha, Remote

- Built and evaluated supervised learning models for classification and prediction tasks, applying core AI concepts to solve real world business problems.
- Cleaned, normalized, and engineered features across multiple datasets to improve model accuracy and training efficiency.
- Trained and benchmarked models in Python using NumPy, Pandas, Scikit learn, and TensorFlow, comparing approaches to select optimal performers.
- Delivered assigned mini projects on schedule within a remote, cross functional team by maintaining clear communication and consistent progress reporting.

IT and Networking Intern

July 2025 to September 2025

Fauji Fertilizer Company Limited, Goth Machhi

- Diagnosed and resolved enterprise network connectivity issues by applying IP addressing, routing, and switching fundamentals under senior IT engineer guidance.
- Gained working exposure to SAP enterprise systems, observing how integrated software supports business operations, data handling, and workflow management.
- Supported IT staff with daily system monitoring and technical troubleshooting, strengthening enterprise level problem solving skills.
- Collaborated within a professional technical team, improving cross functional communication and coordination on live infrastructure tasks.

PROJECTS

Kashmiri Apple Leaf Disease Detection System (Final Year Project)

- Designed and trained a Convolutional Neural Network in Python and TensorFlow to classify apple leaf diseases from a labeled image dataset.
- Achieved high classification accuracy by iterating on model architecture and preprocessing pipelines using Google Colab and Kaggle.
- Deployed a user-facing web application enabling real-time image upload and instant disease prediction for end users.

Brain Tumor Detection System Using Deep Learning

- Developed a CNN-based medical image classification system to detect and categorize tumor-affected regions in MRI brain scans.
- Processed and augmented publicly available medical imaging datasets using Python, TensorFlow, Keras, and OpenCV to improve model generalization.
- Built an accessible interface for uploading MRI scans and generating real-time diagnostic predictions.

Fake News Detection System

- Engineered an NLP-based text classification pipeline to distinguish authentic from fabricated news articles.
- Applied text preprocessing, cleaning, and feature extraction techniques to maximize signal for downstream models.
- Trained and validated classification models using Pandas, Scikit-learn, and NLTK, improving analytical rigor through systematic evaluation.

Heart Disease Prediction System

- Built a binary classifier predicting heart disease risk using 13 clinical parameters.
- Developed a complete preprocessing pipeline including missing value handling, feature standardization, and EDA for data correlations.
- Deployed the application on Hugging Face Spaces for easy cloud-based public access.
- Integrated error handling and visualized results as binary labels (0/1) and percentage-based risk scores for clear user interpretation.

EDUCATION

Bachelor of Science in Artificial Intelligence

Khawaja Fareed University of Engineering and Information Technology, Rahim Yar Khan | 2022 to 2026

CERTIFICATIONS

- IT/Internship, Fauji Fertilizer Company Limited (Goth Machhi)
- Data Science and Analytics, HP LIFE (Hewlett Packard)
- Basics of Machine Learning Algorithms, Uniathena
